

General characteristics of the human bacterial species isolated from 2015 to 17 April 2018 along with its classification based on oxygen tolerance (0 being able to tolerate oxygen and 1 strictly anaerobic), risk group, potential pathogenicity and the PMID of it article. A: New species isolated by culturomics approach, but not in the gut; B: Species isolated not by culturomics nor in the gut; C: New species isolated not by culturomics; D: Species isolated by routine culture in our lab; E: Species isolated in the human gut by culturomics; F: New species isolated in the human gut by culturomics; G: Species isolated in the human gut and not by culturomics.
